Experiment - 13

Aim - To implement ping program

```
import os
import platform
import subprocess

def ping(host="google.com", count=4):
    param="-n" if platform.system().lower()
    ="windows" else "-c"
    command=["ping", param, str(count), host]
    output=subprocess.check_output(command)
    print(output)

if __name__=="__main__":
    ping("8.8.8.8")
```

Output:

Pinging 8.8.8.8 with 32 bytes of data:

Reply from 8.8.8.8 bytes = 32 times 6ms TTL = 119

Reply from 8.8.8.8 bytes = 32 time = 9ms TTL = 119

Ping statistics for 8.8.8.8:

Packet: Sent = 4, Recieved = 4, Lost = 0 (0% loss),

Approx. round trip times in multi-seconds:

minimum = 5ms, Maximum = 9ms, Average = 7ms.

Result:

Thus, the program has been executed successfully.
